

# **A Review on the Teaching Training of UWTSD**

Zhang Yinghui

On August 18, the 4-week teaching and training program was successfully concluded. Now, I am recalling that time and writing a review in a familiar place where I work and live. Swansea is a beautiful, quiet seaside town in Wales that is my fond memories of the summer of 2023. This experience is very valuable and rewarding for me. To summarize, the harvest is divided into three parts. The first is the help to my teaching methods, which makes me clear the role of teachers and teaching methods from a professional perspective. The second is the opportunity to participate in the academic conference and discuss the scientific research content with scholars from all over the world. The third is to know a lot of excellent teachers of Inner Mongolia University.

In terms of teaching, we have learned two modules, including research methods for education, leadership and management in education. Research methods are vital tools for understanding and improving teaching methods, including quantitative research, qualitative research, and mixed-methods research. Leadership and management are dynamic roles in our teaching and researching. My original understanding of these contents was very limited before teaching training. As a teacher in class, the head teacher of undergraduate students, the supervisor of graduate students, a teacher in the college, and so on, these different work contents decide that I have different roles. In my opinion, when I understand the true meaning and connotation of research methods, leadership and management in education, it will be of great significance to my future teaching work. During the teaching training, the teachers encourage thinking and encourages dialogue. Real time interaction and encouraging everyone to actively seek answers are indeed a great culture and way. The teachers are also on hand to initiate interactive teaching and encourage everyone to feel free. The teachers experience and share in the participation, which is also one of the profound feelings. Meanwhile, the teachers give a few minutes to discuss in groups, and each group will explain their own views and analysis at the end.

During the training, I also had the opportunity to attend the IEEE International

Conference on Computing, Electronic & Communications Engineering. Keynote speech is presented by professor Shaflullah Khan. At the conference, scholars from all over the world made relevant reports. Especially, I met Professor Wei from the University of Sheffield. He is a presenting author about Weather Prediction. I am interested in the prediction algorithms, since the green energy is important in Inner Mongolia. We discussed and shared with each other our forecasting methods and the current application of forecasts in China and the UK, including industry, agriculture, and other fields. We hope to cooperate in the future.

In our team, there are many excellent teachers who are my role models. Mr. Duan, insisting on sports, is versatile. Mr. Hu considers others and has an unparalleled perspective on the overall situation. Mr. Wang is knowledgeable, who proficient in Western culture. Ms. Li is good at communication, and Ms. Sun is easygoing in personality. In our team, there are many excellent photographers, skilled chefs, and excellent members of our group who travel together. Thank you for the company and help, which made my 4-week training life interesting.

In summary, the 4-week training not only gained teaching and scientific research methods, but also allowed me to experience different cultures and lifestyles in the UK. In the UK, I also met a lot of people who help me enthusiastically, and I was very embarrassed to enjoy many times for free. These moments made me deeply feel the kindness of the British people. Kind people are always happy, grateful people are always rich. Return safely and be grateful for everything.
